Complete cloud visibility & control platform

Using **Cyscale Cloud Platform** you will have a strong **Inventory** of your cloud infrastructure and a better understanding of the **usage & costs** that it generates thanks to our unique **Graph Database technology**.

01

Key advantages

Multi-cloud support

One tool to manage cloud accounts across all cloud service providers, offering the same layer and level of security in a single Dashboard

02

Risk assessments

Continuously monitor your cloud assets to identify misconfigurations and automatically detect their associated risks

03

Security Knowledge Graph™

Use the Security Knowledge Graph™ to enrich visibility with risk-related information

04

Built-in Compliance Policies

Be one step closer to alignment with the highest standards and enforce policies consistently across providers. (CIS, ISO 27001:2013, SOC 2, NIST 800, NIST CSF, PCIDSS, CCPA, GDPR, HITRUST, HIPAA)

05

Data security

With all cloud assets mapped out, IT and security teams can build a clear roadmap to protect data from external threats (unauthorized access, cyber threats, etc.) and internal risks (insider threats and human error)

06

Flexible pricing

Security scalability is no longer an issue: as the company grows, the subscription adapts thanks to the consumption-based model
